Returning user logs-in with previous set credentials.

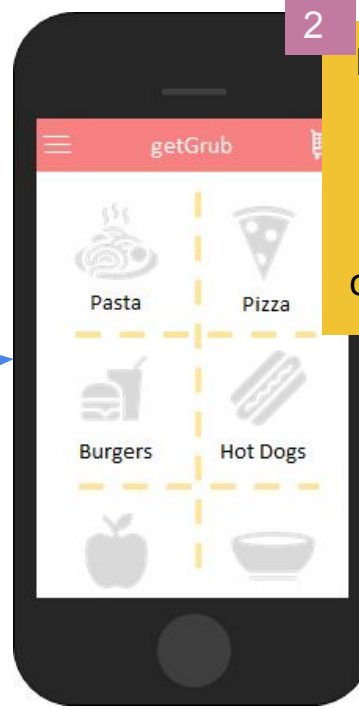

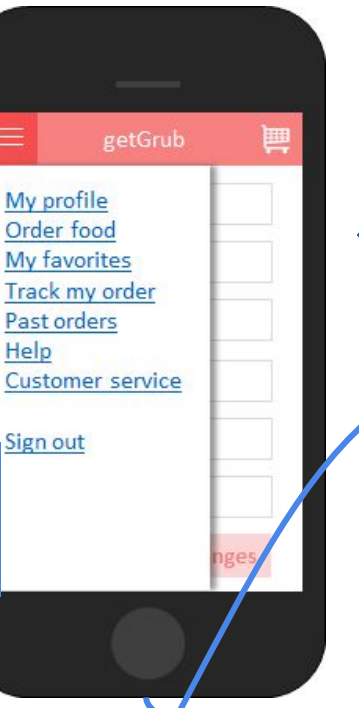

First time user needs to register account.

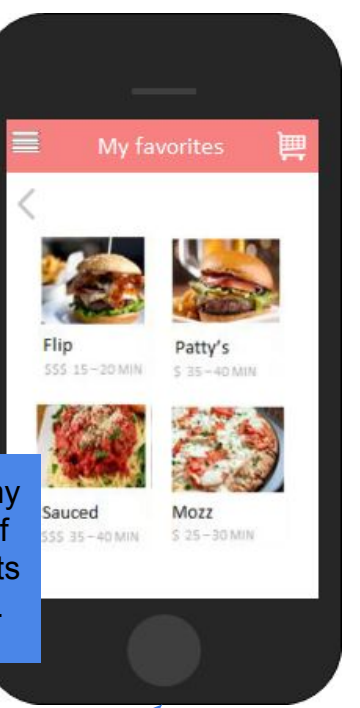

Help screen explains to users how costs are calculated.

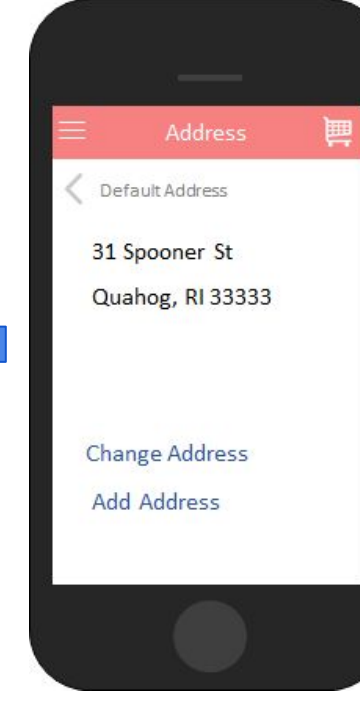

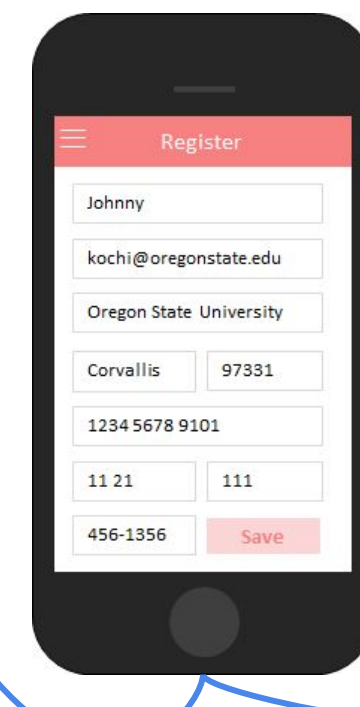

User can update profile information through My profile.

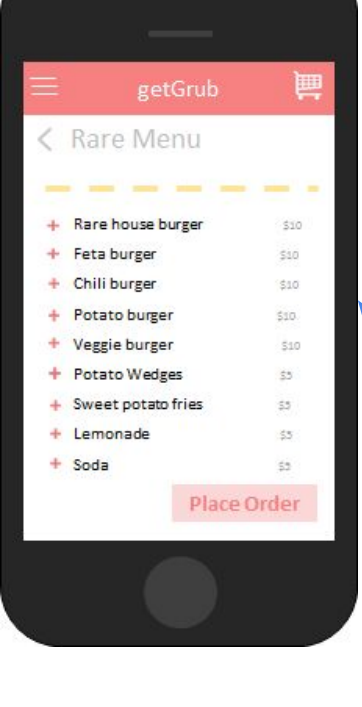

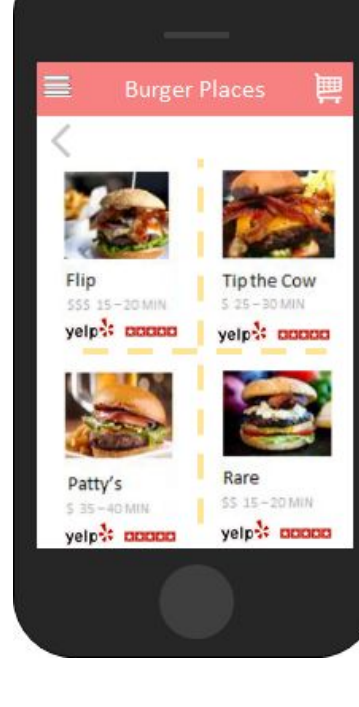

2
Next. The user is ready to start browsing restaurants by type of food or change settings.

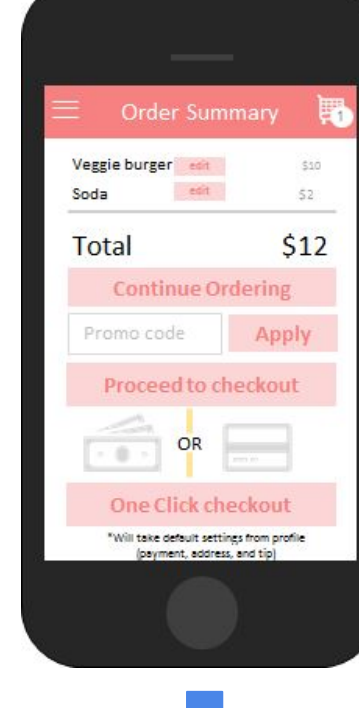

User could choose my favorites and a list of most used restaurants instead of browsing.

Once user chooses food type, a list of restaurants serving that type of food is displayed for the user.

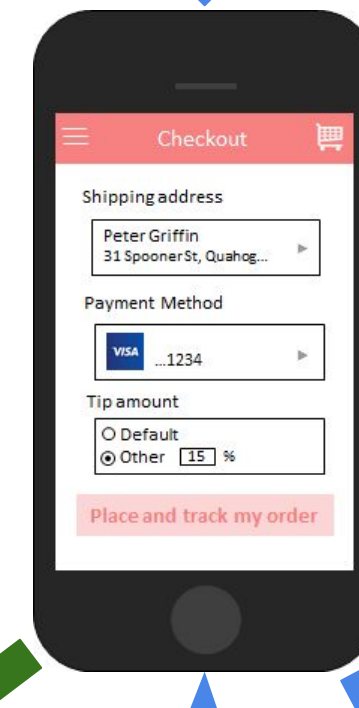

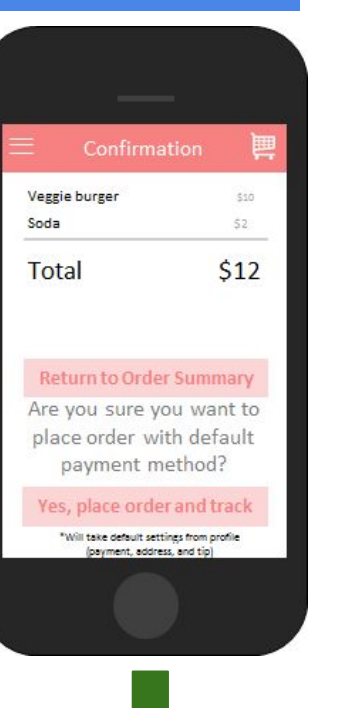

Once user chooses restaurant, menu is displayed..

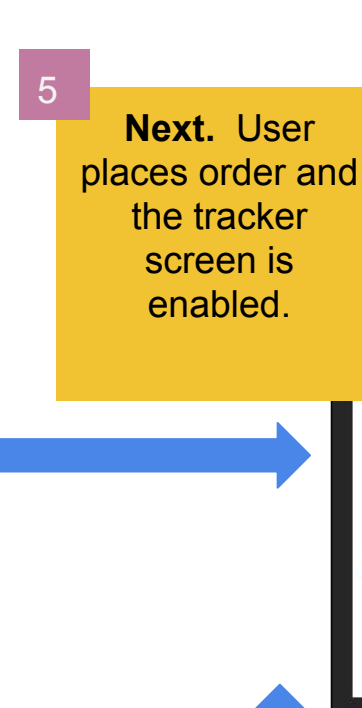

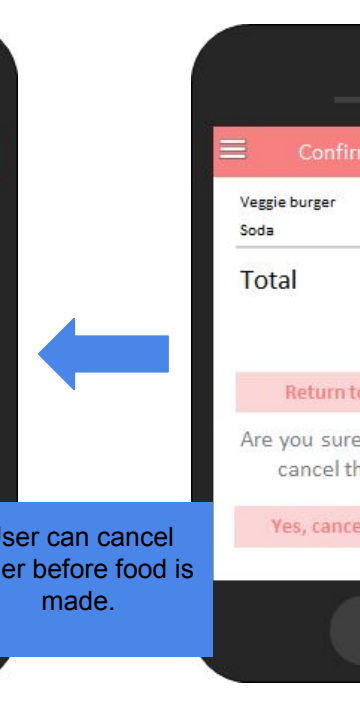

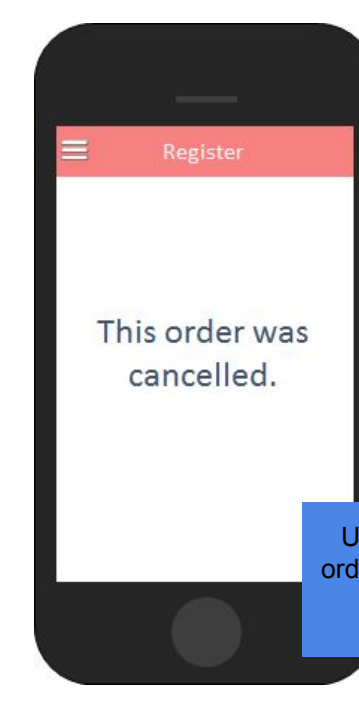

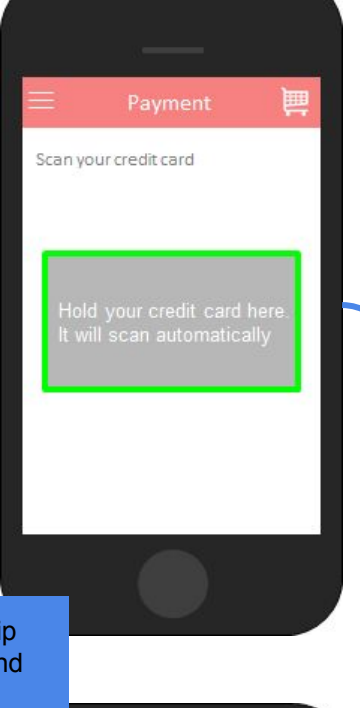

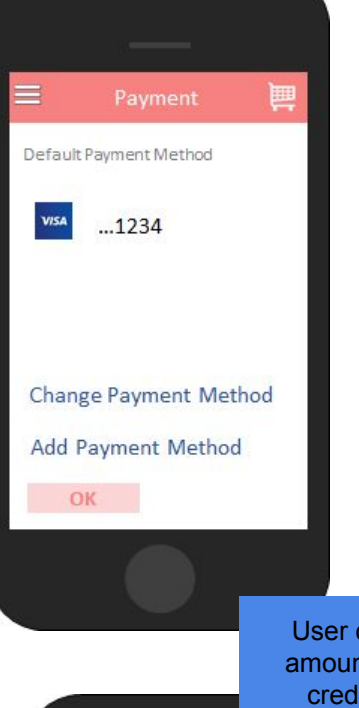

The cart icon displays the order summary. The user can proceed to checkout or order more food.

User chooses One click checkout option. Confirmation page displays

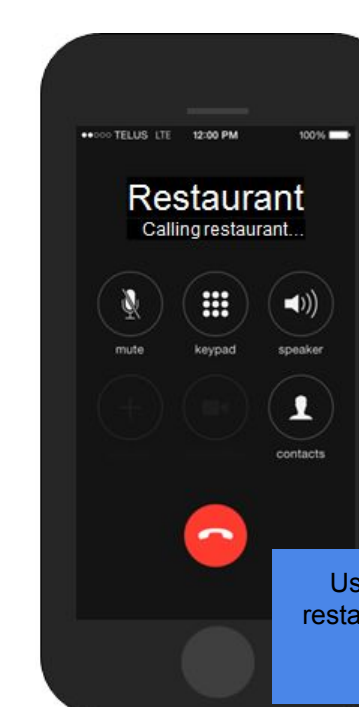

User can change tip amount, address, and credit card during checkout process.

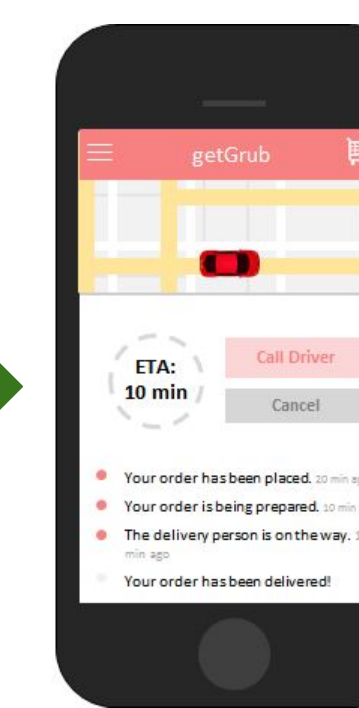

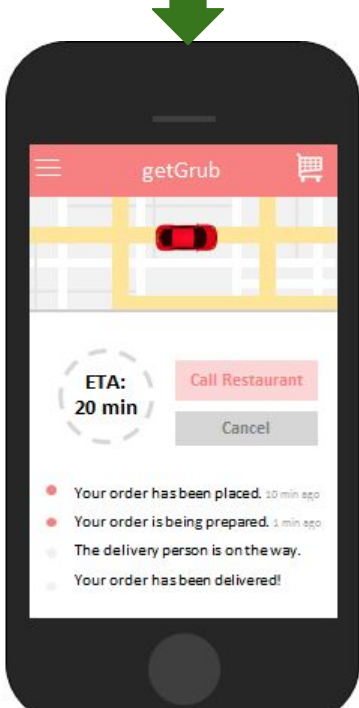

5
Next. User places order and the tracker screen is enabled.

User can cancel order before food is made.

User can call restaurant for any reason.

6
Last. Food is delivered!
